 > Subject: Request for Assistance

> Dear Susan,

> Thank you very much for your assistance over the phone.

The Japanese TV

> network that I am working with is called TV Asahi. We are currently

> working  
 > on a news magazine/documentary program on global warming and abnormal  
 > weather conditions.

> In our program, we would like to present the many problems caused by

> global  
 > warming and explain the research being conducted on the topic. We read

> the  
 > Climate Action Report 2002 and are greatly interested in asking a

> representative from the EPA or any environmental research group to answer

> the following questions:

> 1. Is global warming the main cause of abnormal weather conditions and if

> so, how? If not, is global warming ONE of the many causes of abnormal

> weather conditions? (If possible, we would like to have someone explain

> the  
 > cause using a computer demonstration)

> 2. What is the relationship between global warming and the current

> drought  
 > in Afghanistan? (Is there a relationship between the country's drought

> and  
 > the air current changes caused by global warming?)

> 3. Has global warming increased the likelihood of forest fires such as

> the  
 > one in Denver, Colorado presently? If so, how?

> 4. Is there any relationship between the current extraordinary flood in

> China and global warming?

>

> If possible, we would like to conduct the filming in the  
end of July.

>

> If you could please introduce us to the right  
representative to contact

> within state department, that would be greatly  
appreciated. Please reply

> to

> this e-mail or our phone number, 917-499-5670.

>

> Thank you very much for your assistance.

>

> Sincerely,

>

> Mary Shiratori
